KATA PENGANTAR

Laporan Keluaran Dalam Negeri Kasar (KDNK) mengikut Daerah Pentadbiran ini merupakan penerbitan yang julung kali dikeluarkan oleh Jabatan Perangkaan Malaysia (DOSM). Laporan ini mengandungi statistik KDNK dari tahun 2015 hingga 2020 bagi setiap 89 daerah pentadbiran di Semenanjung Malaysia, 27 daerah pentadbiran di Sabah dan 40 daerah pentadbiran di Sarawak. Penerbitan ini melaporkan prestasi ekonomi di peringkat daerah pentadbiran secara keseluruhan dan mengikut sektor ekonomi. Turut dimuatkan adalah jadual statistik yang memperincikan prestasi ekonomi mengikut negeri dan daerah pentadbiran.

Penganggaran KDNK bagi daerah pentadbiran ini adalah selaras dengan manual antarabangsa iaitu *System of National Accounts 2008* (2008 SNA). Laporan ini mengandungi empat (4) bab. Bab pertama iaitu ringkasan penemuan menerangkan prestasi ekonomi mengikut daerah pentadbiran secara keseluruhan dan lima sektor utama iaitu sektor Pertanian, Perlombongan & pengkuarian, Pembinaan, Pembuatan dan Perkhidmatan. Bab kedua membentangkan jadual statistik mengikut negeri yang memperincikan prestasi ekonomi negeri dari tahun 2015 hingga 2023. Jadual statistik yang memperincikan prestasi ekonomi daerah pentadbiran dari tahun 2015 hingga 2020 dibentangkan pada bab ketiga, manakala indikator mengikut daerah pentadbiran pada bab keempat. Sebagai rujukan tambahan kepada pengguna, jadual statistik dan indikator terpilih daripada kementerian dan agensi serta glosari turut terkandung dalam laporan ini.

KDNK mengikut daerah pentadbiran merupakan maklumat penting yang boleh digunakan oleh agensi Kerajaan Persekutuan, Kerajaan Negeri serta Pihak Berkuasa Tempatan sebagai input dalam perancangan, pemantauan dan pencapaian pelan pembangunan di peringkat negeri dan daerah pentadbiran. Statistik ini juga penting kepada sektor swasta, ahli akademik dan individu sebagai input dan rujukan asas dalam menganalisis pencapaian ekonomi di peringkat daerah pentadbiran.

PREFACE

The Gross Domestic Product (GDP) by Administrative District report is published for the first time by the Department of Statistics Malaysia (DOSM). The publication provides GDP statistics from the year 2015 to 2020 for each of 89 administrative districts in Peninsular Malaysia, 27 administrative districts in Sabah and 40 administrative districts in Sarawak. This publication presented the economic performance at the administrative district level in general and by economic sectors. The report also features statistical tables which detailed economic performance at the states and administrative district levels.

The compilation of GDP by the administrative district is in accordance with the international manuals of System of National Accounts 2008 (2008 SNA). GDP is compiled at current and constant prices using 2015 as the base year according to the production method that produces a value added for each economic activity at the administrative district level.

This report contains four (4) chapters. The first chapter, which is a summary of findings, provides an overview of economic performance by the administrative district as a whole, as well as by five main sectors, namely Agriculture, Mining & quarrying, Construction, Manufacturing and Services. The second chapter presents statistical tables that report the state economic performance from 2015 to 2023. Statistical tables that describe economic performance at the administrative district level from 2015 to 2020 are presented in the third chapter, while indicators by districts are in the fourth chapter. As an additional reference for users, statistical tables and selected indicators from ministries and agencies as well as a glossary are also included in this report.

GDP by administrative district are essential information that can be used by Federal and State Government agencies as well as Local Authorities as input in the planning, monitoring and achievement of development plans at the state and administrative district level. These statistics are also important to the private sector, academia and individuals as input and reference in analyzing economic achievements at the administrative district level.

The Department of Statistics Malaysia expresses its deepest appreciation to all parties who have provided the necessary information and contributed to the successful publication of this report. Suggestions and views towards improving this report in the future are greatly appreciated.

GLOSARI

A

Anggaran penduduk semasa

Anggaran penduduk semasa merujuk kepada saiz penduduk semasa di sesuatu kawasan. Anggaran ini dikira setiap tahun dan kaedah yang digunakan adalah kaedah komponen kohort iaitu pengiraannya berdasarkan perubahan komponen penduduk iaitu kelahiran, kematian serta migrasi dalaman dan antarabangsa bagi tahun semasa. Anggaran ini memberi gambaran tentang pertumbuhan dan perubahan penduduk dari segi struktur dan komposisinya.

B

Bekerja

Semua orang yang bekerja sekurang-kurangnya sejam semasa minggu rujukan untuk mendapatkan upah, keuntungan atau keuntungan keluarga sama ada sebagai majikan, pekerja, bekerja sendiri atau pekerja keluarga tanpa gaji.

D

Duti import

Duti import terdiri daripada duti kastam, atau bayaran import lain, yang mana mesti dibayar ke atas barang bagi jenis tertentu apabila memasuki wilayah ekonomi.

E

Eksport barangan

Sesuatu barang (keluaran atau buatan tempatan atau diimport untuk dieksport semula) dianggap sebagai eksport apabila ianya dibawa keluar dari negara.

I

Import barangan

Sesuatu barang dianggap sebagai import apabila ianya dibawa masuk ke dalam negara, sama ada terus ataupun disimpan di gudang-gudang yang dikawal tanpa mengira sama ada barang tersebut adalah untuk kegunaan sendiri, diproses, digunakan dalam perkilangan ataupun untuk dieksport semula ke negara lain.

Isi rumah

Isi rumah ditakrifkan sebagai seorang atau sekumpulan orang yang bersaudara atau orang yang tidak bersaudara yang biasanya tinggal bersama dan membuat peruntukan yang sama untuk makanan dan keperluan hidup yang lain.

Jangkaan hayat ketika lahir

Jangkaan purata bilangan tahun seseorang bayi yang baru lahir akan hidup dengan mengandaikan corak kadar kematian pada umur tertentu yang tetap.

K

KDNK kaedah pengeluaran

KDNK berasaskan pendekatan pengeluaran (output) boleh didefinisikan sebagai jumlah nilai barangan dan perkhidmatan yang dikeluarkan di Malaysia setelah ditolak dengan barangan dan perkhidmatan yang digunakan dalam proses pengeluaran (penggunaan perantaraan) sebelum ditolak penggunaan modal tetap.

Kaedah ini turut dikenali sebagai kaedah nilai ditambah kerana ia bersamaan dengan penjumlahan nilai ditambah iaitu jumlah perbezaan di antara nilai output kasar unit pengeluaran residen (yang diukur dalam harga pengeluar) dengan nilai penggunaan perantaraan (yang diukur dalam nilai pembeli) dan ditambah dengan duti import. Perbezaan antara output kasar dengan penggunaan perantaraan adalah nilai ditambah. Kaedah ini akan dapat menunjukkan sumbangan setiap aktiviti ekonomi terhadap keseluruhan KDNK.

KDNK pada harga malar

KDNK pada harga malar adalah nilai KDNK tanpa kesan harga berdasarkan tingkat harga terpilih pada tahun rujukan/ asas. Sebagai satu kaedah mengukur pengeluaran, KDNK mengukur jumlah nilai pengeluaran barangan dan perkhidmatan oleh residen sesebuah negara dalam tempoh tertentu sebelum ditolak peruntukan untuk penggunaan modal tetap.

Pengukuran nilai barangan dan perkhidmatan dalam bentuk wang (Ringgit Malaysia) bergantung kepada perubahan harga dan kuantiti. Pengasingan kesan harga daripada penganggaran nilai adalah penting bagi membolehkan perbandingan sebenar iaitu perubahan tingkat/ kuantiti barang dan perkhidmatan yang berlaku dalam aktiviti ekonomi dapat diukur.

Kaedah deflasi terbahagi kepada deflasi tunggal dan deflasi berganda digunakan untuk mendapatkan siri harga malar. Kaedah deflasi tunggal mengeluarkan pengaruh harga daripada output atau input yang telah dianggarkan manakala kaedah deflasi berganda pula mengeluarkan pengaruh harga daripada kedua-dua output dan input. Oleh yang demikian, nilai ditambah adalah perbezaan daripada hasil tolak output dan input. Kaedah deflasi berganda digunakan secara meluas dalam KDNK bagi kaedah pengeluaran.

KDNK per kapita

KDNK per kapita adalah KDNK purata penduduk-penduduk dalam sebuah daerah pada tempoh masa tertentu. KDNK per kapita bagi sesebuah daerah diperoleh dengan membahagikan KDNK daerah dengan jumlah penduduk dalam daerah tersebut pada tempoh masa yang sama.

$$\text{KDNK per kapita} = \frac{\text{KDNK pada harga semasa}}{\text{Penduduk}}$$

Kadar kelahiran kasar

$$\frac{\text{Bilangan kelahiran hidup dalam tahun t}}{\text{Penduduk pertengahan tahun dalam tahun t}} \times 1000$$

Kadar kematian kasar

$$\frac{\text{Bilangan kematian dalam tahun t}}{\text{Penduduk pertengahan tahun dalam tahun t}} \times 1000$$

Kadar penyertaan tenaga buruh

Kadar penyertaan tenaga buruh ditakrifkan sebagai perkadaran penduduk dalam tenaga buruh kepada penduduk dalam umur bekerja (15-64 tahun) dalam bentuk peratusan. Formula adalah seperti berikut:

$$\text{Kadar penyertaan tenaga buruh} = \frac{\text{Bilangan penduduk dalam tenaga buruh}}{\text{Bilangan penduduk umur bekerja (15-64 tahun)}} \times 100$$

Kadar pengangguran

Kadar pengangguran ialah perkadaran penduduk yang menganggur kepada jumlah penduduk di dalam tenaga buruh. Kadar ini mengukur peratus penduduk di dalam tenaga buruh yang tidak bekerja. Kadar pengangguran dikira menggunakan formula berikut:

$$\text{Kadar pengangguran} = \frac{\text{Bilangan penganggur}}{\text{Bilangan penduduk dalam tenaga buruh}} \times 100$$

Kadar pertambahan semulajadi kasar	$\frac{\text{(Bilangan kelahiran hidup – Bilangan kematian) dalam tahun t}}{\text{Penduduk pertengahan tahun dalam tahun t}} \times 1{,}000$
Kelahiran hidup	Merujuk kepada kelahiran yang bernyawa semasa dilahirkan walaupun hanya seketika.
Keluaran Dalam Negeri Kasar (KDNK)	KDNK adalah jumlah barangan dan perkhidmatan yang dikeluarkan dalam tempoh tertentu selepas ditolak kos barang dan perkhidmatan yang digunakan dalam proses pengeluaran. Nilai ini merupakan nilai sebelum ditolak nilai peruntukan bagi modal tetap; iaitu jumlah nilai ditambah pada harga pengeluar bagi pengeluar residen ditambah duti import. KDNK ini juga bersamaan dengan perbelanjaan ke atas KDNK (pada harga pembeli) iaitu jumlah bagi semua komponen perbelanjaan akhir ke atas barangan dan perkhidmatan tolak import barangan dan perkhidmatan. KDNK boleh diukur dengan menggunakan tiga kaedah iaitu, kaedah pengeluaran (penjumlahan nilai ditambah), perbelanjaan (penjumlahan perbelanjaan akhir) dan pendapatan (penjumlahan pendapatan yang diagihkan oleh unit pengeluar residen). Walau bagaimanapun, penyusunan ini hanya menumpu kepada kaedah pengeluaran sahaja.
Kemiskinan	Konsep kemiskinan dalam penerbitan ini merujuk kepada jenis item terpilih untuk dapatan nilai Pendapatan Garis Kemiskinan (PGK) makanan berdasarkan umur, jantina dan penempatan isi rumah luar bandar dan bandar manakala PGK bukan makanan adalah berdasarkan item seperti pakaian, perumahan, barang tahan lama, pengangkutan dan barang bukan makanan lain setiap isi rumah. Isi rumah dianggap miskin jika pendapatan bulanan diterima kurang daripada nilai PGK yang diperlukan oleh isi rumah kurang sumber pendapatan untuk memenuhi keperluan asas makanan dan bukan makanan. Isi rumah dianggap miskin tegar jika pendapatan kurang daripada nilai PGK makanan yang diperlukan.
Kepadatan penduduk	Kepadatan penduduk sekilometer persegi telah dikira sebagai nisbah bilangan penduduk sesuatu kawasan geografi kepada keluasan dalam kilometer persegi bagi kawasan yang sama.

L

Luar tenaga buruh

Penduduk yang tidak dikelaskan sebagai bekerja atau menganggur dikategorikan sebagai luar tenaga buruh. Kategori ini terdiri daripada suri rumah, pelajar (termasuk mereka yang akan melanjutkan pelajaran), mereka yang telah bersara, tidak berkeupayaan dan mereka yang tidak berminat untuk mencari pekerjaan.

N

Nilai ditambah

Nilai ditambah adalah perbezaan di antara output dan penggunaan perantaraan. Ia merupakan nilai ditambah barangan dan perkhidmatan dalam aktiviti ekonomi. Oleh itu, ia hampir menyamai dengan keuntungan perniagaan, gaji dan upah, susut nilai dan cukai tidak langsung; campur faedah yang dibayar dan tolak faedah yang diterima.

O

Output

Output adalah nilai barangan dan perkhidmatan yang dikeluarkan. Ia termasuk pengeluaran untuk pasaran, pengeluaran untuk kegunaan sendiri dan pengeluaran bukan pasaran (perkhidmatan kerajaan dan NPISHs). Pengeluaran barangan dan perkhidmatan tidak semestinya untuk dijual atau perolehan oleh pertubuhan.

P

Pekali Gini

Pekali Gini merupakan salah satu indikator pengukuran ketidaksamarataan pendapatan yang kerap digunakan bagi kebanyakan negara termasuk Malaysia. Nilai pekali Gini bermula dari 0 bagi kesamarataan sempurna hingga 1 bagi ketidaksamarataan sempurna. Nilai pekali Gini yang mempunyai nilai kesamarataan sempurna ada kalanya tidak menggambarkan pembangunan sesebuah negara. Manakala, ketidaksamarataan sempurna pula berlaku disebabkan proses pembangunan sedang berlaku di negara tertentu.

Pembinaan

Pembinaan baru, pengubahsuaian, pembaikan dan perobohan. Pemasangan sebarang jenis jentera atau peralatan yang dipasang ketika pembinaan asal adalah diambil kira, demikian juga bagi pemasangan jentera atau peralatan selepas pembinaan asal tetapi memerlukan perubahan struktur bagi pemasangannya.

GLOSARI

Pembuatan

Perubahan fizikal atau kimia ke atas bahan atau komponen menjadi produk baru sama ada kerja itu dilakukan oleh jentera pacuan kuasa atau yang dijalankan dengan tangan, sama ada dilaksanakan di kilang atau di rumah pekerja dan sama ada barang keluaran dijual secara borong atau runcit.

Pendapatan

Definisi pendapatan yang digunakan adalah merujuk kepada *Canberra Group Handbook on Household Income Statistics, Second Edition* (2011) yang diterbitkan oleh United Nations. Punca pendapatan adalah merangkumi:

i. Pekerjaan bergaji
   Pendapatan daripada pekerjaan bergaji boleh diterima dalam bentuk wang tunai atau dalam bentuk barangan dan perkhidmatan. Ini termasuk upah dan gaji untuk masa bekerja dan kerja yang dilakukan, bonus tunai dan ganjaran, komisen dan tips, elaun, bonus perkongsian keuntungan dan lain-lain bentuk pembayaran keuntungan yang berkaitan dan barangan & perkhidmatan percuma atau subsidi daripada majikan (termasuk makanan percuma/ konsesi).

ii. Bekerja sendiri
   Pendapatan yang diterima oleh individu hasil daripada bekerja sendiri. Pendapatan bersih daripada bekerja sendiri termasuk keuntungan atau kerugian yang terakru kepada pemilik atau rakan kongsi atau mereka yang bekerja dalam perusahaan yang tidak diperbadankan. Ia juga termasuk anggaran nilai barangan dan perkhidmatan yang diperoleh melalui pertukaran barang serta barangan atau tanaman/ ternakan yang dihasilkan untuk kegunaan sendiri, setelah ditolak kos perbelanjaan.

   Asas untuk mengukur pendapatan daripada bekerja sendiri dalam statistik pendapatan isi rumah adalah berdasarkan konsep pendapatan bersih, iaitu, nilai output kasar ditolak kos operasi dan selepas pelarasan bagi susut nilai aset yang digunakan dalam pengeluaran. Keuntungan berlaku apabila pendapatan adalah lebih besar daripada perbelanjaan operasi, manakala kerugian berlaku apabila perbelanjaan operasi adalah lebih besar daripada penerimaan.

GLOSARI

Pendapatan Garis Kemiskinan (PGK)

Pendapatan garis kemiskinan Malaysia mula dibangunkan pada 1977 dengan memperkenalkan bakul keperluan asas minimum untuk menyara kehidupan seisi rumah. Anggaran kos dibuat berdasarkan perbelanjaan terhadap item di dalam bakul ini yang merangkumi keperluan asas minimum makanan dan bukan makanan. Nilaian keperluan asas ini menghasilkan satu paras pendapatan minimum yang dikenali sebagai Pendapatan Garis Kemiskinan (PGK) isi rumah iaitu nilai ringgit yang diperlukan oleh sesebuah isi rumah untuk memenuhi keperluan hidup.

Nilai PGK merupakan hasil gabungan PGK makanan dan PGK bukan makanan.

i. PGK Makanan
PGK Makanan = Kos makanan individu sebulan + Kos-kos lain untuk penyediaan makanan sebulan

ii. PGK Bukan Makanan
$PLI_{j,I} = \beta_i N_j P_{j,I}$

Berdasarkan formula tertera di atas, nilai ß adalah nilai pemalar untuk jumlah kos yang diperlukan ahli isi rumah untuk satu item bukan makanan jika berada dalam penempatan rujukan seperti W.P. Kuala Lumpur. Nilai PGK bukan makanan merupakan hasil darab di antara nilai pemalar (ß), bilangan ahli isi rumah (N) dan harga relatif item (P).

Penganggur

Penganggur adalah mereka yang tidak bekerja semasa minggu rujukan dan dikelaskan kepada dua kumpulan iaitu penganggur aktif dan penganggur tidak aktif.

Penganggur aktif adalah mereka yang bersedia untuk bekerja dan aktif mencari pekerjaan dalam minggu rujukan.

Penganggur tidak aktif adalah mereka yang berada dalam kategori berikut:

i. Tidak mencari pekerjaan dalam minggu rujukan kerana percaya tidak terdapat pekerjaan atau pun tidak berkelayakan;

ii. mungkin mencari pekerjaan jika tidak kerana sakit atau keadaan cuaca; dan

iii. telah mencari pekerjaan sebelum minggu rujukan dan sedang menunggu jawapan permohonan pekerjaan.

Penggunaan perantaraan

Penggunaan perantaraan adalah nilai barangan dan perkhidmatan yang digunakan (sebagai input) dalam proses pengeluaran barangan dan perkhidmatan tidak termasuk gaji & upah, susut nilai daripada modal dan faedah bersih yang dibayar.

Perbelanjaan isi rumah

Definisi perbelanjaan isi rumah yang digunapakai adalah mengikut konsep dan garis panduan oleh United Nations menerusi penerbitan *A System of National Accounts, 2008 oleh United Nations dan Framework for Statistics on the Distribution of Household Income, Consumption and Wealth*, 2013 yang diterbitkan oleh *Organisation for Economic Co-operation and Development* (OECD). Perbelanjaan isi rumah ini boleh dibahagikan kepada dua jenis iaitu perbelanjaan penggunaan dan perbelanjaan bukan penggunaan.

Perbelanjaan penggunaan isi rumah

Perbelanjaan penggunaan isi rumah adalah segala perbelanjaan untuk kegunaan persendirian ke atas barangan dan perkhidmatan sepanjang tempoh rujukan. Perbelanjaan ini termasuk:

i. Semua perbelanjaan sama ada tunai atau kredit oleh ahli-ahli isi rumah ke atas barangan dan perkhidmatan untuk kegunaan persendirian. Jenis perbelanjaan ini termasuk juga cukai-cukai yang dibayar untuk mendapatkan barangan dan perkhidmatan tersebut.

ii. Semua barangan, perkhidmatan dan kemudahan yang diterima dalam bentuk mata benda sama ada secara percuma atau konsesi, diambil kira sebagai perbelanjaan. Contohnya, makanan dan tempat penginapan percuma atau dengan bayaran konsesi. Nilai daripada makanan dan tempat penginapan tersebut dikira sebagai perbelanjaan kepada isi rumah berkenaan;

iii. Barangan penggunaan sendiri. Contohnya sayur-sayuran hasil tanaman sendiri atau barangan yang diambil dari kedai runcit sendiri untuk kegunaan persendirian perlu dibuat imputasi mengikut harga runcit. Nilai harga tersebut dikira sebagai perbelanjaan isi rumah berkenaan; dan

iv. Nilai sewa bersih rumah yang diduduki oleh pemiliknya juga diambil kira sebagai perbelanjaan. Nilai sewa tersebut perlu dibuat imputasi mengikut nilai sewa pasaran semasa untuk jenis rumah yang sama di kawasan yang sama.

Pertubuhan	Sesebuah pertubuhan secara ideal ditakrifkan sebagai "satu unit ekonomi yang bergiat di bawah satu hak milik atau penguasaan tunggal, iaitu di bawah satu entiti yang sah. Ia menjalankan satu jenis subsektor ekonomi utama di satu tempat/ lokasi fizikal". Setiap pertubuhan diberikan klasifikasi industri berdasarkan aktiviti utamanya dan bukannya mengikut aktiviti syarikat induk.
Pertumbuhan penduduk	Merujuk kepada perubahan penduduk sejajar dengan perubahan masa dan boleh dikira sebagai perubahan bilangan individu dalam penduduk menggunakan "per unit masa" sebagai pengukuran.
Pusat kepentingan ekonomi utama	Pusat kepentingan ekonomi utama merangkumi kawalan efektif sesebuah kerajaan negeri terhadap aktiviti ekonomi yang dilakukan khususnya ke atas hak pemilikan. Wilayah ekonomi adalah termasuk tanah, ruang udara, pengairan, hak ke atas perikanan, minyak atau mineral. Biasanya, kawalan efektif kerajaan negeri boleh dilihat melalui pemberian lesen, kawalan operasi dan sebagainya. Sesuatu unit institusi mempunyai pusat kepentingan ekonomi yang dominan dalam sesebuah wilayah ekonomi apabila wujudnya lokasi, tempat kediaman, tempat pengeluaran atau lain-lain premis. Setiap unit tersebut terlibat dalam aktiviti ekonomi dan transaksi berskala besar bagi satu tempoh masa yang panjang. Berdasarkan 2008 SNA, terdapat tiga jenis unit institusi iaitu yang mempunyai pusat kepentingan ekonomi dan kebanyakan aktiviti adalah di dalam lingkungan satu wilayah; unit pelbagai wilayah dengan pusat kepentingannya di beberapa wilayah tetapi bukan seluruh negara; dan unit yang beroperasi pada peringkat nasional, iaitu pusat kepentingannya tidak boleh dikaitkan dengan kedudukan geografi (negeri Supra).
S	
Supra	Supra pada peringkat negeri adalah bersamaan dengan organisasi luar wilayah pada peringkat nasional. Di Malaysia, negeri Supra merangkumi aktiviti pengeluaran yang melangkaui pusat kepentingan ekonomi utama bagi mana-mana negeri.

T

Tenaga buruh

Tenaga buruh merujuk kepada penduduk dalam kumpulan umur bekerja sama ada bekerja atau menganggur.

U

Unit pengeluaran

Unit pengeluaran dianggap sebagai residen yang mana individu atau isi rumah yang tinggal atau menetap di sesebuah daerah bagi tempoh tidak kurang dari satu tahun, manakala bagi pertubuhan pula ialah apabila ia mengekalkan pusat kepentingan ekonominya di wilayah ekonomi daerah tersebut sepanjang tempoh rujukan berkenaan. Wilayah ekonomi adalah terdiri daripada mana-mana kawasan geografi yang ditadbir oleh kerajaan negeri, di mana orang, barang, perkhidmatan dan modal adalah bergerak secara bebas. KDNK pada harga pasaran/ pembeli mewakili keputusan akhir daripada aktiviti pengeluaran oleh unit pengeluar residen.

Sesuatu unit institusi dianggap residen bagi sesebuah wilayah ekonomi apabila wujudnya perkaitan yang kuat antara unit institusi tersebut di wilayah ekonomi tertentu, dengan kata lain pusat kepentingan ekonomi utama (2008 SNA).

G

Gross Domestic Product (GDP)

GDP is the amount of goods and services produced in a certain period after deducting the cost of goods and services used in the production process. This value is the value before deducting the allocation value for fixed capital; that is, the total value added to the producer price for resident producers plus import duty. This GDP is also equivalent to expenditure on GDP (at buyer's prices) which is the sum of all components of final expenditure on goods and services minus imports of goods and services.

GDP can be measured using three methods, namely, the production method (summation of value added), expenditure (summation of final expenditure) and income (summation of income distributed by resident producing units). However, this arrangement only focuses on production methods.

GDP production method

GDP based on production approach (output) can be defined as the sum of value of goods and services produced in Malaysia after subtracting goods and services used in the production process (intermediate consumption) before deducting the consumption of fixed capital.

This approach is also known as value added approach because it is equal to the summation of value added, that is, total differences between gross output value of resident producing unit (measured at producer price) and value of intermediate consumption (measured at purchaser's price) and added with import duties. Difference between gross output and intermediate consumption is value added. This approach will be able to show the contribution of each economic activity on overall GDP.

GDP at constant prices

GDP at constant prices is the value of GDP without price effects based on the selected price level in the reference/ base year. As a method of measuring production, GDP measures the total value of production of goods and services by residents of a country in a certain period before deducting allocations for the use of fixed capital.

Measurement of goods and services in value of money (Ringgit Malaysia) depends on the changes of price and quantity. Isolation of price change effect from estimation value is important to allow the actual comparison, which is the change in level/ volume of goods and services from economic activity.

The direct deflation method which consists of single deflation and double deflation is used to obtain real price series. The single deflation method takes out the price effect from the output or the input, while double deflation method takes out the price effect from both output and input. Hence, value added is derived as the residual from output and input. Double deflation method is widely used in GDP for production approach.

GDP per capita

GDP per capita is the average GDP of the residents in a district during a certain period of time. GDP per capita for a district is obtained by dividing the district's GDP by the total population in the district during the same period of time.

$$\text{GDP per capita} = \frac{\text{GDP at current prices}}{\text{Population}}$$

Gini coefficient

The Gini coefficient is one of the inequality measurement indicators that is often used by most countries including Malaysia. The value of the Gini coefficient starts from 0 for perfect equality to 1 for perfect inequality. The value of the Gini coefficient which has a value of perfect equality sometimes does not reflect the development of a country. Meanwhile, perfect inequality occurs because the development process is slow in certain countries.

H

Household

A household is defined as a person or group of related or unrelated people who usually live together and make common provisions for food and other living essentials.

Household expenditure

The definition of household expenditure used is based on the concepts and guidelines System of National Accounts, 2008 by United Nations and Framework for Statistics on the Distribution of Household Income, Consumption and Wealth, 2013 by Organisation for Economic Co-operation and Development (OECD). This expenditure can be divided into two types, namely consumption expenditure and non-consumption expenditure.

Household consumption expenditure

Household consumption expenditure is the expenditure for private consumption on goods and services during the reference period. These expenditure include:

i. All expenditure either in cash or credit by household members on goods and services for personal use. This type of expenditure also includes taxes paid for goods and services;

ii. All goods, services and facilities received in kind, whether free or concession is considered as expenditure. For example, free or concession food and lodging;

iii. Goods for own consumption. For instance, vegetables taken from own farm or goods from own shop consumed by household were imputed at retail prices. The imputed prices were regarded as expenditure for the household; and

iv. Net rental value of owner-occupied house was also included as expenditure. This rental value has to be imputed referring to the present market value of similar type of house in the same area.

GLOSSARY

I

Import duties

Import duties consist of customs duties, or other import fees, which must be paid on goods of a certain type when entering the economic territory.

Income

Detailed information on income is obtained from household members who receive income. The concept and definition of income used in this survey refers to the Canberra Group Handbook on Household Income Statistics, Second Edition, 2011 published by the United Nations. The sources of income include:

i. Paid employment

Income from paid employment can be received in the form of cash or in the form of goods and services. This includes wages and salaries for time worked and work performed; cash bonuses and gratuities; commissions and tips; allowance; profit-sharing bonuses and other forms of profit-related payments and free or subsidised goods & services from employers (including free food/ concession).

ii. Self-employment

Income earned by individuals as a result of self-employment. Net income from self-employment includes profits or losses accruing to owners or partners or those working in an unincorporated enterprise. It also includes an estimate of the value of goods and services obtained through barter as well as goods or crops/ livestock produced for own use, after deducting operating expenses.

The basis for measuring income from self-employment in household income statistics is based on the concept of net income, which is the value of gross output minus operating costs and after adjustment for depreciation of assets used in production. Profit occurs when income is greater than operating expenses, while a loss occurs when operating expenses are greater than earnings.

Intermediate consumption

Intermediate consumption is the value of goods and services consumed (as input) in the production process of goods and services excluded salaries and wages, depreciation of capital and net interest paid.

GLOSSARY

L

Labour force

All persons in the working age who are either employed or unemployed.

Labour force participation rate

Labour force participation rate is defined as the ratio of the labour force to the working age population (15-64 years), expressed as percentage. The formula is as follow:

$$\text{Labour force participation rate} = \frac{\text{Number of persons in the labour force}}{\text{Number of persons in the working age (15-64 years)}} \times 100$$

Live births

Refers to births with signs of life during delivery although for a very short period

Life expectancy

The average number of years a person is expected to live at the beginning of a certain age, assuming the mortality rate of a certain age is the same throughout his or her lifetime.

Life expectancy at birth

Life expectancy at birth reflects mortality. It is independent of the population's age structure and is not influenced by extraneous factors such as the selection of a standard population, changes in birth rates and other demographic phenomena.

M

Manufacturing

The physical or chemical transformation of materials or components into new products, whether the work is performed by power-driven machines or by hand, whether it is done in a factory or in the worker's home, and whether the products are sold at wholesale or retail.

Merchandise exports

Goods (locally produced or manufactured or imported for subsequent re-exports) are regarded as exports when taken out of the country.

Merchandise imports

Goods are regarded as imports when they are brought into the country either directly or into bonded warehouses, irrespective of whether such goods are for consumption, to be processed, used in manufacturing or subsequent re-exports to other countries.

Mining and quarrying

Mining and quarrying include the extraction of minerals occurring naturally as solids (coal and ores), liquids (petroleum) or gases

(natural gas). Extraction can be achieved by different methods such as underground or surface mining, well operation, seabed mining, etc.

i. *Mining is defined as the extraction, dressing and beneficiating of minerals occurring naturally as solids, such as coal and ores; liquids, such as crude oil; or gases, such as natural gas. Mining also includes underground and surface mines, quarries and wells and all supplemental activities for dressing and beneficiating ores and other crude minerals such as crushing, screening, washing, cleaning, grading, milling, flotation, melting, pelleting, topping and other preparations needed to render the material marketable. Mining activities are classified into groups on the basis of the principal mineral produced.*

ii. *Quarrying refers to activity of extraction from a mine or quarry, but also dredging of alluvial deposits, rock crushing and the use of salt marshes. The products are used most notably in construction (e.g. sands, stones, etc.), manufacture of materials (e.g. clay, gypsum, calcium, etc.), manufacture of chemicals, etc. It includes quarrying, rough trimming and sawing of monumental and building stone such as marble, granite, sandstones, etc., quarrying, crushing and breaking of limestone, mining of gypsum and anhydrite, mining of chalk and unclaimed dolomite, extraction and dredging of industrial sand, sand for construction and gravel, breaking and crushing of stone and gravel, quarrying of sand and mining of clays, refractory clays and kaolin. Activities of It also include mining of chemical and fertilizer minerals, extraction of peat, extraction of salt, etc.*

iii. *Petroleum and natural gas refers to the production of crude petroleum, the mining and extraction of oil from oil shale and oil sands and the production of natural gas and recovery of hydrocarbon liquids. This includes the overall activities of operating and/ or developing oil and gas field properties, including such activities as drilling, completing and equipping wells, operating separators, emulsion breakers, desilting equipment and field gathering lines for crude petroleum and all other activities in the preparation of oil and gas up to the point of shipment from the producing property. It also includes support activities for petroleum and gas extraction, such as oil and gas field services, performed on a fee or contract basis, oil and gas well exploration and test drilling and boring activities.*

GLOSSARY

O

Outside force labour

All persons not classified as employed or unemployed are classified as outside labour force. This category consists of housewives, students (including those going for further studies), retirees, disabled person and those not interested in looking for jobs.

P

Population density

Population density per square kilometer was calculated as the ratio of the number of inhabitants of a geographical area to the area in square kilometers of the same area.

Population growth

Refers to the change in population over time and can be quantified as the change in the number of individuals in a population using "per unit time" for measurement.

Poverty

The concept of poverty in this publication refers to the selected type of item for value acquisition of food Poverty Line Income (PLI) based on age, gender and location of rural and urban household while non-food PLI is based on items such as clothing, housing, durable item, transportation and other non food item of every household. Household is considered as poor if monthly income received is less than PLI value that is needed by household with lesser income sources to meet basic needs of food and non-food. Household is considered as hardcore poor if income is less than the value of food PLI needed.

Poverty Line Income (PLI)

Malaysia's poverty line income was first developed in 1977 by introducing a basket of minimum basic needs to support the life of the whole household. Cost estimates are made based on expenditure on items in this basket which include the minimum basic needs of food and non-food. This assessment of basic needs results in a minimum income level known as PLI which is the ringgit value required by a household to meet life necessities.

PLI value is the combined result of food PLI and non-food PLI.

i. *Food PLI*
Food PLI = Monthly individual food cost + Other costs for food provision in a month

ii. *Non-Food PLI*
$PLI_{j,I} = \beta_i N_j P_{j,I}$

Based on the above formula, the value of ß is a constant value for the total cost needed by household members for one non-food item if they live in the reference location such as W.P. Kuala Lumpur. The value of non-food PLI is the product of the constant value (ß), the number of household members (N) and the relative price of the item (P).

Predominant economic interest

Predominant economic Interest incorporates effective economic control of a single government in terms of rights to ownership. The economic territory includes the land area, airspace, territorial waters, including jurisdiction over fishing rights and rights to fuels or minerals. Generally, effective control by the government can be seen through license approval, control on operation and so on.

An institutional unit has a centre of predominant economic interest in an economic territory when there exists, within the economic territory, some locations, dwellings, place of productions, or other premises on which or from which the unit engages and intends to continue engaging, either indefinitely or over a finite but long period of time, in economic activities and transactions on a significant scale.

Production unit

A production unit is considered a resident which is an individual or household that lives or resides in a district for a period of not less than one year, while for organizations it is when it maintains its center of economic interest in the economic region of the district throughout the reference period. An economic region consists of any geographical area administered by a state government, where people, goods, services and capital move freely. GDP at market/ buyer prices represents the final result from production activities by resident producing units.

An institutional unit is considered resident for an economic region when there is a strong connection between those institutional units in a certain economic region, in other words a center of main economic interest (2008 SNA).

Supra

The 2008 SNA has identified three types of institutional units, e.g. those with centre of interest in and most of its activities confined to one region; multi-regional units with centre of interest in more than

one region, but does not relate to the entire country; and units functioning at a national dimension – whose centre of interest cannot be attached to geographical domains of the country (Supra State).

Supra state territory at the state level is equivalent to extra-territorial organizations at the national level. In the case of Malaysia, Supra State covers production activities that are beyond the centre of predominant economic interest for any state.

U

Unemployed

All persons who did not work during the reference week and are classified into two groups that are actively unemployed and inactively unemployed.

The actively unemployed include all persons who were available for work and were actively looking for work during the reference week.

Inactively unemployed persons include those in the following categories:

a. *did not look for work because they believed no work was available or that they were not qualified;*
b. *would have looked for work if they had not been temporarily ill or had it not been for weather condition; and*
c. *had looked for work prior to the reference week and were waiting for result of job applications.*

Unemployment rate

Unemployment rate is the proportion of unemployed population to the total population in labour force. This rate measures the percentage of unemployed population in labour force. Unemployment rate is computed by using the formula below:

$$\text{Unemployment rate} = \frac{\text{Number of unemployed persons}}{\text{Number of persons in the labour force}} \times 100$$

V

Value added

Value added is the difference between output and intermediate consumption. It represents the added value of goods and services by economic activity. Hence, it is approximately equivalent to commercial profit, salaries and wages, depreciation and indirect taxes; plus interest paid less interest received.
